

## Fungi

These images of microorganisms were captured with an electron microscope.

## Bacteria

Other types of microorganisms that play an important role in the soil food web include protozoa and nematodes.

# Microorganisms

## Invertebrates

**Ant\***

**Composting Worm**

**Earthworm**

**Grubs\*  
(beetle larvae)**

**Millipedes**

**Slug\***

**Snail\***

**Sow Bug\***

**Earwig**

\*When present in abundance these invertebrates can be considered pests because of their potential harm to garden plants. A diverse and balanced soil ecosystem is important for garden health!
